"2015 was a good year despite the challenging macroeconomic environment. Outstanding investment performance and \$23 billion in full-year net cash flows, 4 percent of beginning of the year AUM, highlight our success in attracting and retaining retail, retirement and institutional investors around the world," said Dan Houston, president and chief executive officer. "Additionally, we continue to capitalize on growth opportunities in the U.S. group benefits business with Specialty Benefits delivering record 2015 earnings, and we continue to benefit from earnings diversification provided by our U.S. insurance businesses overall. We remain focused on advancing global retirement readiness, helping individuals around the world save, invest and protect their assets."

Added Terry Lillis, executive vice president and chief financial officer, "In 2015, we were able to deploy nearly 90 percent of our net income. This was well above our initial guidance and shows the strength of our businesses and their ability to generate deployable capital. This enabled us to increase our full year 2015 dividend by 17 percent over 2014 and repurchase 5.5 million shares of our common stock. Additionally, we closed on the acquisition of the AXA's Hong Kong pension retirement business, enabling us to further build upon our strategic international operations. Our balanced approach to capital deployment is centered on increasing long term shareholder value."

Use of Non-GAAP Financial Measures

The company uses a number of non-GAAP financial measures that management believes are useful to investors because they illustrate the performance of normal, ongoing operations, which is important in understanding and evaluating the company's financial condition and results of operations. They are not, however, a substitute for U.S. GAAP financial measures. Therefore, the company has provided reconciliations of the non-GAAP measures to the most directly comparable U.S. GAAP measure at the end of the release. The company adjusts U.S. GAAP measures for items not directly related to ongoing operations. However, it is possible these adjusting items have occurred in the past and could recur in future reporting periods. Management also uses non-GAAP measures for goal setting, as a basis for determining employee and senior management awards and compensation, and evaluating performance on a basis comparable to that used by investors and securities analysts.

While these items may be significant components in understanding and assessing our consolidated financial performance, management believes the presentation of operating earnings enhances the understanding of results of operations by highlighting earnings attributable to the normal, ongoing operations of the company's businesses.
